

Open Weather Map

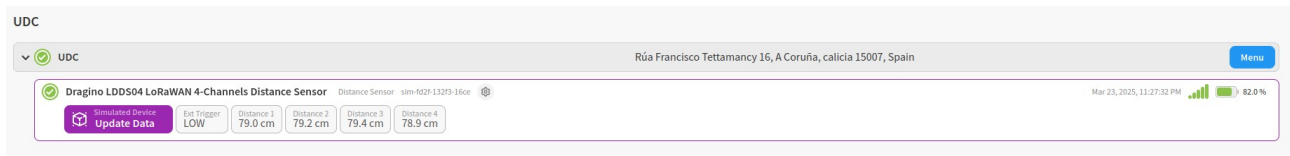

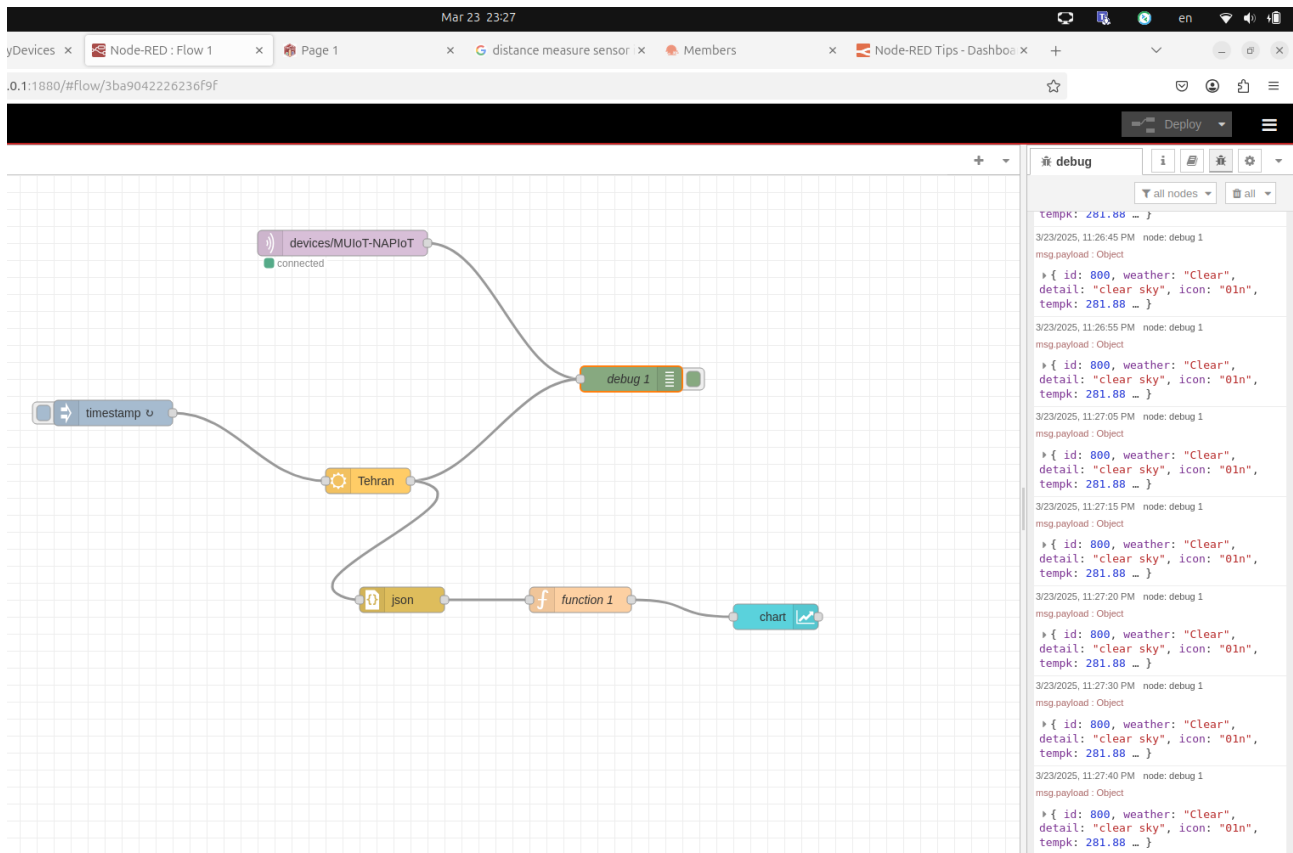

Regarding the connection of FlowFuse to OpenWeatherMap, an attempt was made to monitor the weather in Tehran, the capital of Iran. The following image shows the weather conditions in Tehran displayed in the debug console.

The combine project

In this section the Dragino LDDS04 LoRaWAN 4-Channels Distance Sensor is used to give the

debug node the measure and by adding the open weather map, the map shows the temperature of the Tehran in chart every 10 second which is the properties of the inject.
